

## VueLink for Open Text

VueLink for Open Text Livelink adds document viewing and markup capabilities to the Open Text client. It provides a seamless user interface and tight integration at both the client and server levels between Livelink and AutoVue.

Markups/Annotations/Redlines are automatically saved on the server and are available to other users to edit or view, depending on their document access level.

VueLink and AutoVue Professional for Open Text give users the following powerful features and capabilities - locally, or remotely :

Securely view documents in your business objects without editing them.

Support for over 450 Engineering and Business documents formats

View multiple markup files

- Create markups/redlines/annotations using a rich set of annotation tools.
- Create hyperlink connections to other related documents.
- Consolidate several markup files (perhaps from different reviewers) into one markup file
- Control Regular, Read only, Master, and Consolidated markup access to markup files.
- Markups are associated with a specific revision of a document. Markups may be migrated to new revisions if needed.
- Graphically compare different revisions of Engineering drawings.
- Add information contained in your chosen fields from Matrix as print Watermarks, Header or Footers.
- Sign markups using the CIC electronic signature package (CIC product required).

VueLink for Open Text also provides users the basis to add further powerful functionality to Livelink installation through the use of custom designed tools.

Custom designed tools offer many possibilities. Users can create intelligent custom stamps that query for document information to include in a markup.

Custom applications can be created to extract relevant information from an AutoCAD or MicroStation file, and automatically link it with information (such as a Bill of Materials) available in the Livelink vault. This brings the concept of intelligent drawings to a new level.

These features are also available from within your Web Browser using the Client-Server Editions of AutoVue.

### **About Cimmetry Systems, Corp.:**

Cimmetry Systems Corporation is the global leader in Collaborative Visualization solutions for the A/E/C, Engineering, Manufacturing and Electronics markets. AutoVue is the premier enterprise-wide viewing, printing, markup, digital mockup and collaboration solution that supports hundreds of native 2D/3D CAD & EDA formats, MS Office, PDF documents and graphics.

Cimmetry is a wholly-owned subsidiary of [Agile Software Corporation](#) (Nasdaq: AGIL), a leading provider of product lifecycle management (PLM) solutions.

Visit [www.cadvision.fr](http://www.cadvision.fr) to download a demo copy of AutoVue and for the latest Cimmetry news.
